

## Aligning vertical/horizontal centres

Here's a quick PS mini-tutorial to help you align photos and mats.

1. Select all of the objects you want to align.
2. Click on your Move tool.
3. Along your top tool bar you will find alignment options.
4. You can align your objects in so many different ways. Hold your mouse over the options to read the description.
5. Simply click on the option you want, e.g. align the bottom/top edges, or ensure that the space between the three objects is even.
6. Experiment ... and your scrapping life will be so much more balanced.
