folder previews

## Folder previews

Here's a quick Photoshop mini-tutorial to help you nominate (and keep!) preview images for your digiscrapping folders ... this is what I do!

1. Check in your kit folder. you should have a preview image in the folder, with a designer/kit name, for example ... kskd\_delight\_preview.jpg
2. Right-click and copy and paste the preview image, renaming the image in the process to ... folder.jpg.
3. So now you have two preview images in your kit folder, one with the original name the designer gave it, and one you have renamed 'folder.jpg'.
4. When you exit the folder, you will see now that it has one large preview image.
5. And that's all there is to it!!! Enjoy!
